Stats for calculated questions, excluding Q18, Q19, Q20, Q21  
Sum of valid response values : 682  
Total number of valid response values : 140  
Average : 4.9

N at the bottom indicates the number of records that are included in the average calculations for that questions. There are a few reasons why a response would not be included in the average calculations, most of which are explained below.

N\*, in purple, italicized indicates a null answer, i.e., the student did not choose a response for this question (note that this is different than choosing an answer, if one exist - NA responses usually don't stamp a null, but rather a non-averaged value - see below). Null answers are not included in average calculations.

C\* indicates a comment question. Comments are displayed in detail below.

Values in red are not bounded by the questions response set and are problematic. For example, if you had a value of 7 in a question that was attached response set with values 0-6, the value would be considered unbounded. Technically, this should never be possible, but the system flags the condition if encountered. Unbounded values are not calculated in averages.

Values in purple, italicized indicate a response set value which has been designated as not averaged. Typically, if a response set has an NA choice, it into this category. These values will not be included in the average calculations.

Averages are only calculated for numeric values. If you have a field that collects alphanumeric values, only those values that are exclusively numeric will included in the average calculations. For instance, if Q1 has responses John, 1, 3, Paul, [N]\*, the system will calculate the average of the field as 2, from 1 (John, Paul, and [N]\* are discarded). Averages are also affected by unbounded and non-averaged values, as specified above, in questions that are attached response sets.

### COMMENT QUESTION SUMMARY

#### 22. Please provide additional comments regarding the instructor

Survey ID 114564 : Professor is highly knowledgeable in the area. She has done fantastic job on delivering the contents of the course work. This course has been "THE BEST" experience for me at Oakland University. Professor is very organized and very thoughtful about every aspect of the course work. She has implemented an automated grading system to grade wherever possible. Also, she provides very good feedback, answers questions from students. Outstanding!

Survey ID 115016 : Professor Zhao is an excellent teacher, she always prepares the material before coming to class and capable of answering a lot of deep questions that require critical thinking. She conveys the content of the class in a very approachable manner, the flow of the lecture boils up the knowledge sequence that makes the learner understand the fundamentals. I have tried to read a lot of textbooks on the subject matter, but I did not quite understand until I have listened to her explanation. Overall, this is a fantastic course taught by a very caring and knowledgeable professor.

Survey ID 115084 : Dr. Zhao is one of the best professors I have ever had. This could have been a tough course material-wise, but her approach to introducing the concept made it clear. I learned in this course, didn't memorize or feel overwhelmed trying to understand. I learned at a very detailed level the concepts of machine learning, I understand the structure of well-known models, I can talk about them, I can explain them, and I can implement them. The best course! Highly Recommend to all!

#### 23. Please provide additional comments regarding the course

Survey ID 114564 : This course is a foundational course work for anyone interested in deep learning and applying the techniques. There is a lot to learn, at the same point, I thought there is too much to learn and it could be tough to deliver all that knowledge, applications within certain hours per week. I request OU/SEC to provide GPU resources for this class. It has been challenging to arrange GPU for project work and learning. It is unacceptable that university doesn't provide a deep learning class in 2024! And Professor did a good job by providing GPU access in Google Cloud, however, it is very complicated to make use of Google Cloud for this coursework.

Survey ID 115084 : This course is not easy but really essential for CS. The pace and material coverage were perfect. This is not an easy course though. To practice the material and the course projects were invaluable learning experiences but took many hours to complete. In the end, the course projects covered the topics we had been learning about. I won't forget any of this material and it's very relevant to all of our futures. Good amount of work, but I would do it again.

#### 24. Please provide additional comments regarding grading and evaluation

Survey ID 114564 : Professor had automated grading system for quizzes and exams(whenever possible). It has been fair grading, she did evaluate project presentations for the course. It was great experience overall. There were enough assignments, quizzes, projects, exams and professor did great job at set up and evaluating students.

Survey ID 115084 : Dr. Zhao was very communicative and accepting of our feedback. Her grading seemed fair and accurate.

**25. Please provide additional comments regarding anything else**

Survey ID 114564 : It is unacceptable that university doesnt provide GPU for deep learning class in 2024! And Professor did a good job by providing GPU Google Cloud, however, it is very complicated to make use of Google cloud for this coursework. Kindly request university to provide GPU access on prem for every student enrolling in this class.

Survey ID 115084 : If possible, GPU access for the students of this course would be life changing on the course projects.
